EXTERIOR WOOD DOORS
WITH AQUASEAL™ TECHNOLOGY

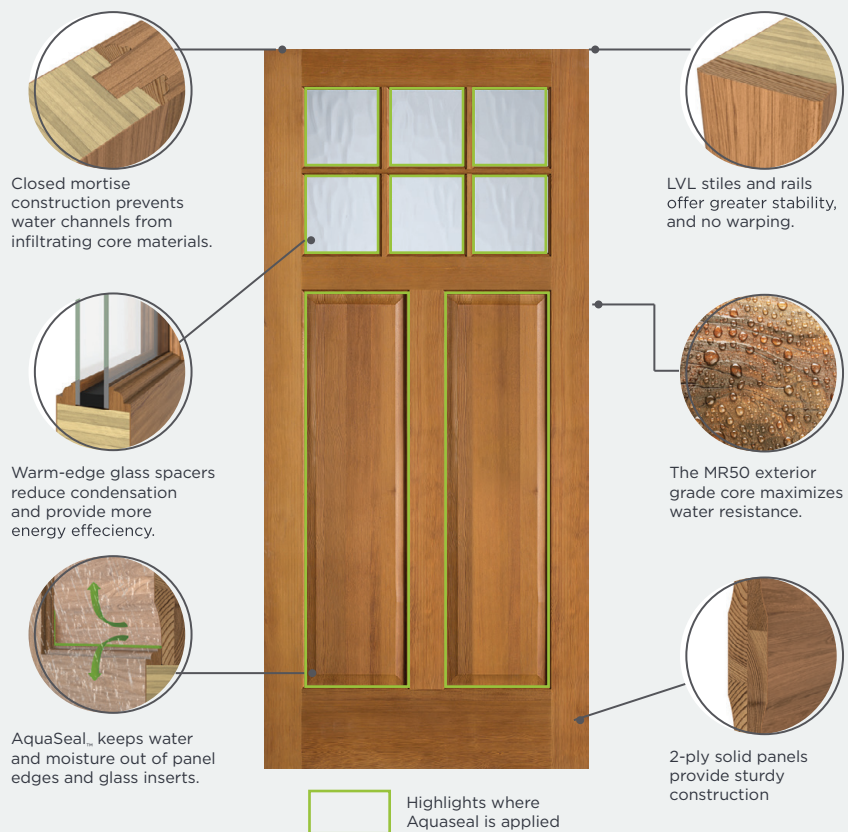

► 2632 with Rain glass in Torrefied Maple

BWI
DISTRIBUTION
by Masonite

YOUR NEW WOOD DOOR IS BEAUTIFUL.

Our job is to help keep it looking just like new. That's why we created AquaSeal™, a proprietary Masonite technology that provides a barrier of clear protection against water, moisture and the elements.

BEAUTY, AQUASEALED.

AquaSealed Glass and Panels

AquaSeal_™ technology goes on clear and seals the edges of wood panels and glass inserts to protect against water penetration. The sealant is both paintable and stainable.

Simulated Water Damage on Panels and Glass

In an unsealed wood door, water seeps in around the glass and panels, which can lead to damage in the form of cracking, splitting, delamination, bowing or warping of your wood door.

THE CLEAR DIFFERENCE

► C30 in Mahogany

AquaSeal can deliver up to 22 times the protection against water penetration compared to exterior wood doors without AquaSeal_™, comes with a 5-year* limited warranty and preserves the door's natural beauty.

That's why we apply AquaSeal_™ to every single DuraStyle_™ exterior wood door. A wood door isn't truly finished until it's been AquaSealed.

*5-year limited warranty applies to standard wood species, Torrefied Species comes with a 20-year warranty
